https://www.andrewbeaver.dev/ | https://github.com/andbeaver

Software developer in the IT Programming program at NSCC seeking a Spring 2026 work placement. Experienced in building full-stack, mobile, systems, and cloud-based applications through academic, personal, and hackathon projects. Graduating in Spring 2026 and continuing into a bachelor's in applied computer science at Dalhousie University in Fall 2026.

Projects

TicketHive | Full-Stack Web Application — Academic Project

C#, ASP.NET Core MVC, React, Node.js/Express, SQL Server, EF Core, Azure Blob Storage

- Built a cloud-deployed ticketing platform with an admin portal, customer React app, and secure Node.js/Express API.
- Implemented authentication, CRUD operations, and Azure Blob Storage image handling in the ASP.NET Core portal.
- Developed a multi-step purchase workflow in React with validation, reusable components, and dynamic routing.
- Designed a relational database schema and optimized SQL joins and environment-based configuration across services.

MealWave | Cross Platform Mobile Application — Personal Project

Dart, Flutter, Codemagic CI/CD

- Built a mobile app implementing the Warsaw Method to calculate insulin recommendations for complex meals for those with Type 1 Diabetes.
- Created a time-based insulin-to-carb ratio scheduler with editable, auto-sorted entries and persistent storage.
- Designed a responsive, validation-driven UI with multi-screen navigation (calculator, history, ratio settings).
- Added dynamic Material 3 theming and implemented extended bolus duration calculations.

Halifax Transit App | Android Mobile Application — Academic Project

Kotlin, Jetpack Compose, RoomDB, Mapbox Maps SDK, GTFS Realtime API

- Built an Android app displaying real-time Halifax Transit bus locations using GTFS Realtime feeds.
- Integrated Mapbox for live bus markers, routes, and interactive map controls in a Compose UI.
- Implemented MVVM architecture with RoomDB to persist route selections and maintain sessions.

Arrivio | Full-Stack Web Application — Hackathon Project

React, Vite, Node.js, Express, Google Maps API, Google OAuth, Azure, Notifications API

- Built a commute-planning tool that notifies users when to leave their home with real-time routing, Google OAuth authentication, and location autocomplete.
- Led frontend architecture, state management, and Maps API integration while collaborating on backend endpoints.
- Coordinated a 4-person team using GitHub workflows and feature branching to deliver the MVP in under one week.

Additional Projects

WeatherPal (Android): Real-time weather app using Retrofit and WeatherAPI with GPS-based alerts.
Sentiment Analysis – Machine Learning (ML.NET): C# binary classifier with live retraining UI.
Humans' vs Zombies (C++): Object-oriented simulation utilizing polymorphism and inheritance.

Technical Skills & Experience

Languages: C#, Kotlin, Java, Dart, C, C++, Python, SQL, JavaScript, TypeScript, HTML/CSS.
Web & Backend Frameworks: ASP.NET Core MVC, Node.js, Express, Next.js, Entity Framework Core.
Frontend & Mobile Frameworks: React, React Native, Flutter, Jetpack Compose.
Databases & Cloud: SQL Server, RoomDB, Azure Resources (Blob Storage, App Service, Entra ID, Static Web App), Docker, Azurite.
Design & Architecture: Object-Oriented Programming (Inheritance, Polymorphism, Encapsulation), MVVM, MVC, Relational Database Design, GTFS Realtime Data, Asynchronous Programming.
Tools & Systems: Git/GitHub, Linux (Bash/CLI), Vite, Mapbox SDK, Google OAuth, RESTful API, Agile Methodologies.

Education

IT Programming Diploma - 96% Average — Expected 2026
Nova Scotia Community College | Halifax, NS

Business Administration Diploma, Marketing Concentration — 2018
Nova Scotia Community College | Dartmouth, NS

Work Experience

Lifetouch Canada — Aug 2022 - July 2024
Account Specialist | Halifax, NS

- Coordinated logistics and data workflows for 400+ schools annually, ensuring accurate scheduling and resource allocation.
- Ensured secure handling of all student and staff data by enforcing portal-based collection processes.
- Conducted post-event feedback calls and summarized findings for internal teams to improve operations.
- Maintained databases, calendars, and documentation to support high-volume scheduling and data integrity.

Castle Hall Alternatives — Jan 2019 - Sept 2020
Due Diligence Analyst (Team Lead) | Dartmouth, NS

- Supported institutional clients with billions of dollars invested by conducting due diligence verifications, leading process improvements, and reviewing and activating hundreds of funds across multiple products.
- Led a verification project with a team of six analysts, reviewing 500+ investment funds under strict deadlines.
- Trained and mentored analysts in Manila, creating process documentation and performance metrics to support onboarding processes.
- Created and analyzed KPIs to assess team performance and guide process improvements.
- Conducted due-diligence calls with global investment managers to resolve data discrepancies.

Additional Attributes

- Continuously expanding expertise in diabetes technology, including insulin pump systems, continuous glucose monitoring and regulations through hands-on evaluation and industry research.
- Self-taught investor with knowledge of ETFs, brokerage platforms, and market indexes.
- Fluent in spoken and written French with French Immersion Certificate and DELF B1 certification.
